#### Extract what we want to check

## Confirmation of the company's perspective

### Third-party perspective confirmation

#### Determining dependencies and **Impacts**

# Assessing risks and opportunities

Consider TCFD and TNFD

Selection of two quadrants

with different temperature

zones and worldviews

integration scenarios

Report preparation

following information

- Business model
- Percentage of sales
- Industry Classification by the Sustainable System (SICS)

Organize the environmental impact of the product value chain and check the data and geographical information

of business sites

Dependency and Impact screening

- •ENCORE
- •SBTN's Materiality Screening Tool
- •Cross-referencing with SBTN's High Impact Commodity List

Investigating Connections with Regions Prone to Negative **Impacts** 

- Biodiversity Risk Filter
- Aqueduct

It is suggested that there is a connection with areas with a high risk of "water". In particular, attention to India and China is the result. Recognizing that detailed confirmation based on local conditions is indispensable for effective judgment

Overlay the results suggested by checking the company's own perspective and a third-party perspective to identify "targets" to

Finalize the heatmap

confirm risks and opportunities.

> opportunities and considering countermeasures

Assessing risks and

- Consultation with relevant departments
- Consideration of activities that lead to the maintenance of natural capital

SBTN AR3T frame

 Assessing the impact of business sites in priority regions

Examined from the

- Industry Classification

Extraction of diagnostics business (Instrument and reagents)

appropriateness of the

bases that support the

Confirmation of the

priority area of the

production and R&D

diagnostics business

Disclosure in accordance with TNFD guidance
