Sysmex Corporation

Our Views and Policy regarding Investment Unit Reduction

1. Views on the reduction of investment units

Sysmex recognizes that improvement in stock liquidity and an increase in the number of individual investors are important from the perspectives of stock market revitalization and fair price formation in the stock market, and Sysmex considers that reducing investment units is an effective measure for achieving this goal.

2. Policy on the reduction of investment units

Based on the above recognition, Sysmex currently uses a trading unit of 100 shares, and Sysmex has implemented stock splits repeatedly in an effort to lower the investment unit for its stock. Most recently, the company split its shares two-for-one effective April 1, 2014. Sysmex will continue to address this matter as appropriate, taking its stock price movements, individual shareholders' tendencies, and other factors into account.
